### **Why is it important to work safely in the FCS class?**

After reading and discussing the lab safety information, write a report that

- 1) examines the causes of accidents (Why do accidents happen?)  
and
- 2) explain the effects of those accidents. (What can happen if someone does not follow the safety rules?)

3) What inferences (conclusions) or implications (consequences) can you make? Support your report with evidence from the text and our discussions.

#### Example

The rule is: "Please respect other people when they are talking, by not talking."

The inferences (conclusions) or implications (consequences) could be:

Ex. 1) If I talk while they are talking I am being disrespectful.

Or

Ex. 2) If I talk while they are talking I will not hear what they have to say.
